

CONSTRUCTION PRODUCTION INDICES¹ IN JUNE 2015²

According to the preliminary data, in June 2015 the index of production in section 'Construction' calculated on the base of seasonally adjusted data³ was 2.6% above the level of the previous month (Table 2).

In June 2015 working day adjusted data⁴ showed an increase by 1.5% in the construction production, compared to the same month of 2014 (Table 4).

¹ Data for June 2015 are preliminary.

² The monthly indices show the short-term changes in the construction production between two comparable periods. This information can be used to analyse the current state of the construction activity in the country, as well as short-term forecast for its future development. The indices are calculated on the base of information on hours worked in the construction. The data are collected with monthly sample survey, which includes construction enterprises, which production exceeds 75% of the total production in construction. Construction Production Indices are calculated on the base 2010 = 100.

³ Seasonal adjustment is a statistical method which eliminates the seasonal component of time series.

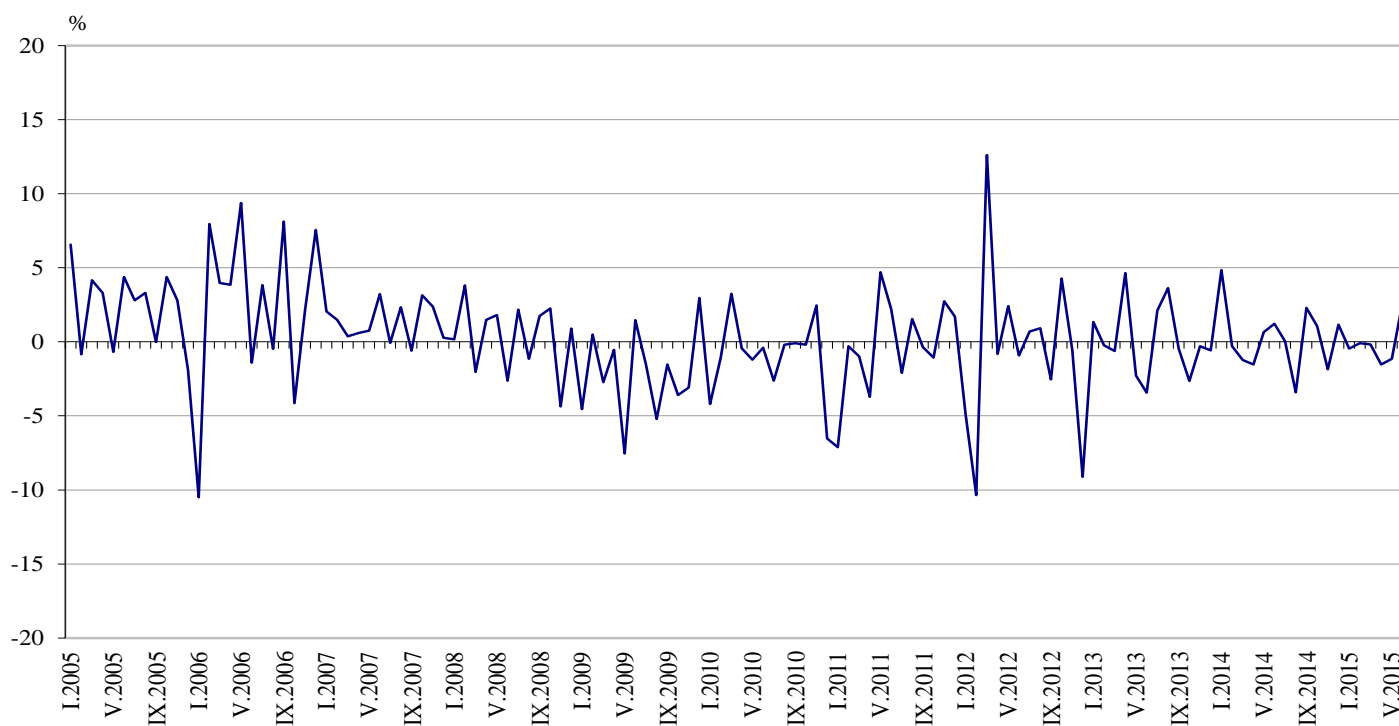

⁴ Working day adjustment is an adjustment for variations in monthly data, caused by calendar effects, different number of calendar and working days in the months, national holidays and outliers (for example the presence of more non-working days in May could contribute to the decline in the production in some activities).

Monthly changes

In June 2015 the construction production, calculated from the seasonally adjusted data, was above the level of the previous month. Index of production of civil engineering increased by 3.6% and the production of building construction - by 1.7% (Table 2).

Annual changes

On an annual basis in June 2015, the increase of production in construction, calculated from working day adjusted data, was determined mainly from the positive rate in the civil engineering by 9.4%, while in the building construction was registered a decrease by 5.4% (Table 4).
